ST. ANTHONY FALLS LABORATORY ~ AUDITORIUM

Open Data for Open Science - The Microsoft Environmental Informatics Framework (EIF)

Dan Fay

Director, Earth, Energy, and Environment, Microsoft External Research

Yan Xu

Senior Research Program Manager, Microsoft Research

Abstract: How to effectively share, discover, access, and consume data from heterogeneous sources is one of the outstanding challenges in today's environmental research. Environmental informatics is about innovatively using computing technologies to solve the data problems and advance the transformation of environmental data to information, to knowledge, and to social impact. This talk will showcase Microsoft Environmental Informatics Framework (EIF), which defines the role that Microsoft Research plays in contributing to the advancement of environmental research worldwide. Interactive discussions with the audience is expected to be a main part of this presentation.
